

Advent Calendar app

The repo is public at <https://github.com/whitespace-software/AdventCalendar.git>

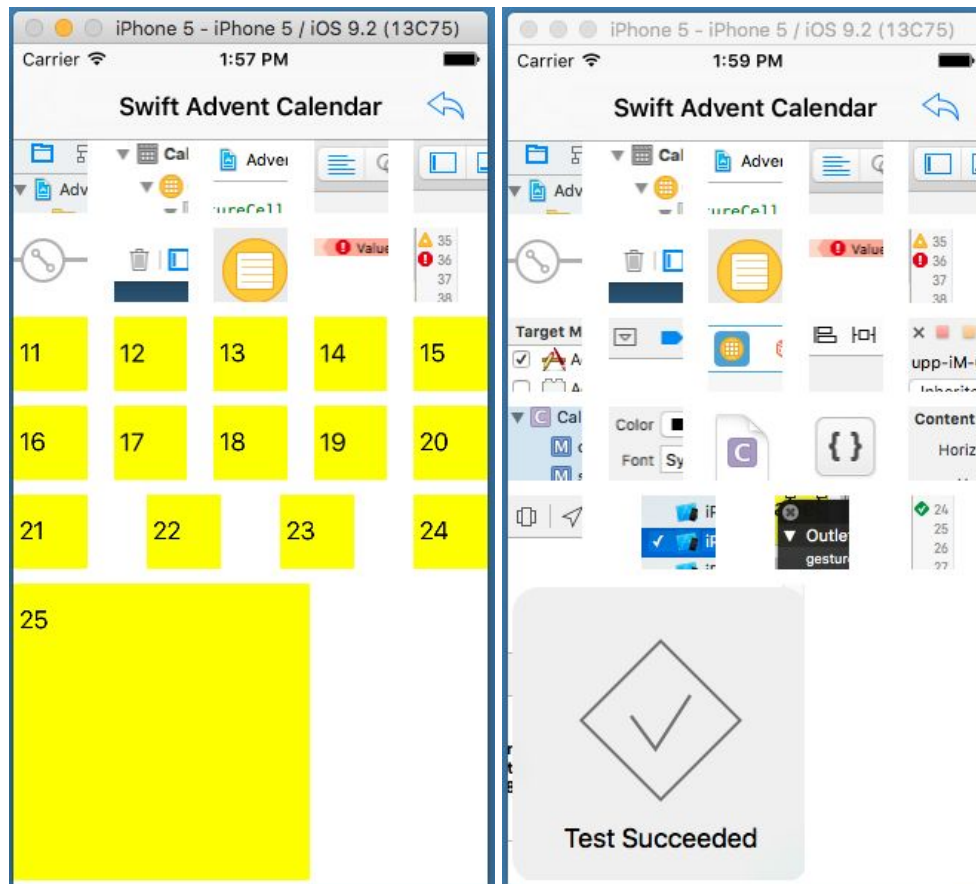

Tag 0.1.0 - 25 yellow squares - done with a Collection View Controller and a Calendar Cell.
A certain amount of Storyboard voodoo to get to this point

Tag 0.1.1 introduced a PictureCell which is displayed for earlier days, plus 25 images to be shown

Tag 0.1.2 added click on today's day to reveal the picture

0.1.3 changed the size of the final box and added a “cheat” button top right

Further Improvements

- Make the numbers on yellow squares pretty. Central justify, and a larger font for the 25.
- Click on a picture to popup the whole image, not just the top left corner
- Control the layout. How about the numbers 1-24 going round the edge, with 25 in the middle?
- Animate the opening of the “window” when you click it
- Some kind of feedback if you click on a window you’re not allowed to open.
- Make it sense the start of a new day.
- Switch to a Hannukah menorah layout?
- Don’t automatically open windows. If yesterday’s hasn’t yet been clicked, require that one to be clicked before today’s. Save where you’re up so it still works if the app is stopped or the phone is switched off.
